

Plantskydd Spray Application

TREATMENT:

- **APPLY ON DRY PLANTS - rainfast in 24 hours**
- **For Deer & Elk** - Dip/Spray mainly tops of plant — until wet but not dripping.
- **For Rabbits** - spray stem and lower leaves.
- **Ornamentals** — spray mainly on leaves of plants until wet - avoid blossoms.
- **ALWAYS TREAT NEW GROWTH**
- Needles/leaves darken temporarily after treatment — original color returns in 18-36 hours.
- Apply at above freezing temperature.
- Avoid application in direct hot sunlight — for best results, apply in early morning or late afternoon.
- Treating Pine seedlings during bud flush is not recommended (OK before/after bud flush period).
- Allow to dry 24 hours before watering plants.
- Rinse sprayer, gloves and planting equipment after use.
- If sprayer clogs, rinse in hot water.
- Use mixed solution within a few days.

Powder Concentrate Mixing Instructions

Mixing Instructions: 1-2-3 *It couldn't be easier!*

1. Select volume of cold water to use from Dilution Rate table below.
2. While stirring, slowly sprinkle in the soluble powder concentrate.
3. Pour solution into your sprayer.

To mix large quantities use a cordless drill with paint-mixer attachment.

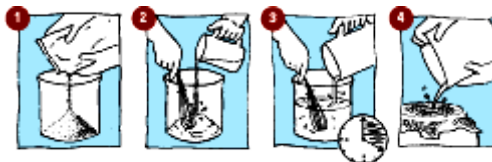

2.2 lbs yields 10 quarts

This package of Plantskydd® soluble powder concentrate makes approximately 10 quarts of ready to spray solution.

Hints & Tips - mixing large volumes of *Plantskydd* powder concentrate

- * a **paint-mixer stir attachment for cordless electric drills** is very effective when mixing Plantskydd powder concentrate in 5 gallon pails of water.
- * high speed mixing and/or prolonged agitation will produce excessive foam.
- * If a 'foam fighter' additive is used, **add it to mixture just before pouring into backpack type sprayers**. Adding 'foam fighters' during mixing process may cause clumping.

* if any undissolved powder clumps remain after stirring, let mixture stand for 20 minutes.
